SAN JOSE, Calif., July 10, 2017 (GLOBE NEWSWIRE) -- [NetEnrich](#), the cloud and IT operations services company, has once again joined forces with Microsoft and global IT distributor Tech Data, to support midsize and enterprise customers, this time in Western Europe. They are launching a new program for a limited time which will give companies a free, comprehensive evaluation for migration of on-premises IT infrastructure and applications to Azure. This "Azure ROI Assessment" is initially available to companies in The Netherlands, Denmark, Sweden and Spain, and will be promoted this week at Microsoft Inspire 2017 in Washington, DC.

The assessment is a thorough evaluation occurring over a period of two to four weeks, offered to make it easy for customers to migrate to Azure. NetEnrich, already a Microsoft Technology Partner for Azure, has helped hundreds of customers on their journey to Azure. The company's proven platform and tools provide a detailed analysis of the on-premises environment for cloud readiness. It provides detailed recommendations on when and where to use Azure Platform-as-a-Service (PaaS) features. Armed with this in-depth analysis, customers can now work with NetEnrich to rapidly migrate their infrastructure and applications to Azure. NetEnrich brings over a decade of expertise in IT operations. Its industry-leading Hybrid Cloud management platform manages and optimizes the Azure environment for customers.

"IT and business leaders often worry about the disruption of moving workloads to the cloud, which is why we're offering this program to migrate them to Azure rapidly and efficiently," says Raju Chekuri, President and CEO of NetEnrich. "We're excited to work with Microsoft and Tech Data to help customers experience an easier path to Azure."

"We're thrilled to know that our customers in Western Europe have the help they need to transform their IT and modernize their applications with Azure," says Edward Moore, Director of Sales and Marketing, Western Europe at Microsoft. "We are always seeking ways to remove barriers to entry to Azure, and NetEnrich and Tech Data are highly experienced providers when it comes to making that happen."

"NetEnrich's experience in hybrid cloud and automation, combined with our long expertise in enterprise IT, is a winning combination for customers," says Reza Honarmand, Vice President, Software and Cloud, at Tech Data. "This program will help partners deliver faster time-to-market, scale and ease of adoption for customers."

## About NetEnrich

NetEnrich combines industrialized services and a proprietary automation platform to deliver IT infrastructure and operations management services from on-premises to cloud. NetEnrich is also a Microsoft technology partner specializing in accelerating deployment, migration and management of application workloads on Azure. Our approach to IT operations reduces costs, mitigates risk, provides control and drives innovation. NetEnrich has five global delivery centers, is headquartered in Silicon Valley, California, and is a Gartner 2015 Cool Vendor.
